

Lamb Concentrate Pellets

A feedlot concentrate pellet for sheep or lambs, with excellent mixing and low dust. Excellent feed conversion, giving market weights without wasted grain or time. Ideal when you have no legumes (plus enhanced performance with 10% legumes).

Mixing Instructions

Mix 50kg pellets per tonne of feed. For best results the grain base needs to be at a 13% protein level. For every 1% of protein below this level you should increase the lupin content (or equivalent) by 5% of total mix.

Ingredients

Lupins 30%, Limestone, Urea, Salt, Mill Run, Wheat 13%, Canola 38% Expeller, Palabind Molasses, Cummins Sheep Premix, Bovatec 15% Premix.

Contains Vitamin A, D3, E, Cobalt, Copper, Iron, Iodine, Manganese, Selenium, Zinc and Antioxidants (to prevent oxidation of minerals in premix and finished feed).

WARNING – CONTAINS UREA

Directions for use

Keep dry: when wet, urea can become soluble and lead to urea toxicity. Introduce slowly and always ensure adequate 'gut-fill' of forage before introducing feed supplements (use this product at a lower inclusion rate for one week before going to the recommended rate). Forage should be provided with the ration or offered ad lib.

Precautions

Feeding this product to horses or other equines may be fatal.
